Cheltenham Ladies' College Science Laboratory Refit

cobus

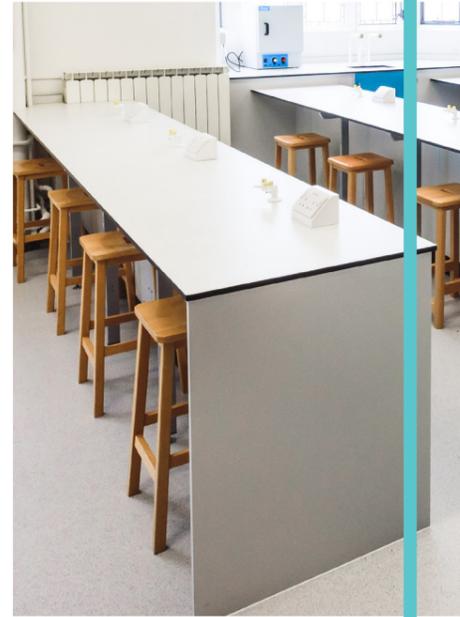

We recently undertook a project with Cheltenham Ladies' College – a leading independent girls' school – to completely renovate its biology laboratory.

The project involved stripping out the old laboratory classroom before installing new facilities for the students. Initially, we were faced with several problems. The building was old, with uneven walls and floors which made it difficult to install the furniture. We encountered issues with inadequate services that didn't conform to regulation.

We carried out the project over a period of four weeks. First, we removed all of the existing furniture, electrical and mechanical services. We then installed new student desking, plumbing, gas supplies and electrical points. We also fitted the classroom out with new flooring, electrical distribution, gas isolation, lighting and decorations.

The project manager, Phil McInnes, said: "Despite some obstacles, we managed to work through them and create a space that's practical for both the teachers and students. The client reported that they are delighted with the modern facilities provided for them. The room is now bright and airy but with all the necessary practical and functional requirements".

Project Date: 2018
Project Manager: Phil McInnes
Project Value: ££
